

# AutoLoad™

---

“I had never operated a tractor & pull scraper before I had the opportunity to test **John Deere’s AutoLoad system**. It was wet conditions and I knew it would be a challenge for the system to work well in poor underfoot conditions. After 10 minutes of instruction and one trip with the instructor, I gave it a try. **I was amazed how easy it was to get both pans full and then spread them my first time around.** I was most impressed by its ability to control the rear scraper in conditions which would normally take a very experienced operator. Several weeks later I had the opportunity to demo the tractor with 2 of our operators, one very experienced and one which had no tractor experience. I timed both operators and after several rounds, the difference between them was almost insignificant. Although there is no substitute for experience, **I believe the AutoLoad system does give an inexperienced operator the ability to perform well in a minimum amount of time, especially when pulling 2 scrapers.**”
